

Financial Accounting (FI) Case Study – Lecturer Notes

This document is intended to help instructors understand the case study process and manage the learning process in and outside the classroom. The main focus lies on prerequisites and common tasks such as testing and trouble-shooting.

MOTIVATION

Theoretical lectures explain concepts, principles, and theories through reading and discussion. They, therefore, enable students to acquire knowledge and gain theoretical insights.

In contrast, case studies allow them to develop their abilities to analyze enterprise problems, learn and develop possible solutions, and make sound decisions.

The main objective of the GBI case studies in general is for students to understand the concept of integration. These descriptive and explanatory case studies will allow students to understand the importance and the advantages of integrating enterprise areas using an S/4HANA system.

The main goal of this document is to help instructors prepare the SAP system for the Financial case study process and to support them trouble-shoot problems that might occur during the course.

Beside technical and didactic prerequisites, the lecturer notes list SAP transactions for testing and correcting student results in the SAP system. In addition, this document describes common problems and explains their reason and solution.

Prerequisites

Note Before using this case study in your classroom please make sure that all technical (month-end closing, user management etc.) and didactic prerequisites are fulfilled. Such prerequisites are briefly pointed out below. Detailed documentation can be displayed at and downloaded from the *Learning Hub of SAP UA* or the *UCC web sites*.

Technical Prerequisites

The case study is based on a standard SAP ERP client with the current GBI dataset. Before processing the case study on your own or with your students all general setting should be checked.

This includes **month-end closing** in Materials Management (transaction **MMPV**) which is documented on the UCC web sites.

Month-end closing in
MM
MMPV

Note: With the current version of the GBI client a **year-end closing** is not necessary, because it has already been automated or because it is not needed for the process described in the curriculum material.

Year-end closing

User accounts in the SAP system need to be created or unlocked.

User management

These student user accounts should end with a three-digit numeric number (e.g. LEARN-001, LEARN-002 etc.). This number will be represented by ### in the case study and helps differentiate customer accounts, products etc.

In an SAP ERP GBI client already exist 1000 user accounts from **LEARN-000** to **LEARN-999**. These users need to be unlocked. The initial password for each LEARN-### account is set to **tlestartt**.

LEARN-000 to
LEARN-999

tlestartt

Transaction **ZUSR** was developed in the GBI client in order to mass maintain SAP user accounts. For a detailed description of this and SAP standard transactions for user management (**SU01** and **SU10**) please refer to the *lecturer notes “User Management”* (see: current GBI curriculum → chapter 99 – Instructor Tools).

ZUSR

SU01
SU10

All LEARN-### user accounts have been assigned to the role **Z_UCC_GBI_SCC** and have authorizations to use all applicative transactions in the SAP ERP system. The role allows access to all transactions necessary for GBI exercises and case studies. If you need access to system-critical transactions, i.e. for development purposes, you may assign the composite profile **SAP_ALL** to your student accounts.

It is useful for the instructor to have a user account available for testing that has the same authorizations as the student accounts. You may use the predefined instructor account **LEARN-000** for this purpose.

Instructor account
LEARN-000

Didactic Prerequisites

In order to successfully process this case study, students should be familiar with the **navigation** in SAP systems, especially the SAP Easy Access menu, the SAP transaction concept as well as possible documentation and help options. We highly recommend using the *navigation slides* and the *navigation course* (see: current GBI curriculum → chapter 2 – Navigation).

Navigation

In addition, it has been proven beneficial that students have a thorough understanding of the **historic background** and the enterprise structure of the Global Bike concern before they start working on the SAP system. For this purpose we recommend the *case study „Global Bike Inc.“* (see: current GBI curriculum → chapter 3 – GBI) or the *case study „Business Process Analysis I“* (see: current GBI curriculum → chapter 98 – Cross-Module).

Company background

Because the case study is not based on the exercises, it is not necessary to have processed the FI exercises before you start with the case study. However, it is recommended.

In order to function properly this case study needs a **GBI client version** that is equal or higher than the case study version (see cover page). Please check. If you do not know the client version please use the transaction **ZGBIVERSION** within your SAP ERP system or contact your UCC team.

GBI client version

Global Feedback

Do you have any suggestions or feedback about GBI? Please send it to our new email-address **gbi@ucc.ovgu.de** which is used to gather feedback globally. All emails will be evaluated by the persons responsible for the curriculum bi-weekly. This way your feedback might influence future releases directly.

Please note that any support requests send to this email-address will be ignored. Please keep using the common support channels for your support requests.

Student Assessment

Note With the transactions listed below you can check and correct master and transactional data that your students have created during your course.

Master Data

FS00	Edit G/L Account Centrally
KA02	Change Cost Element
KA03	Display Cost Element
FK02	Change Vendor
FK03	Display Vendor

Transaction Data

FAGLB03	G/L Account Balance Display
FK10N	Vendor Balance Display
FB03	Display Document: Initial Screen

Problem: Parked Invoice

Symptom While posting the outgoing payment no open items can be found.

Reason The invoice was parked and not posted.

Solution Post the parked document.

Error Message

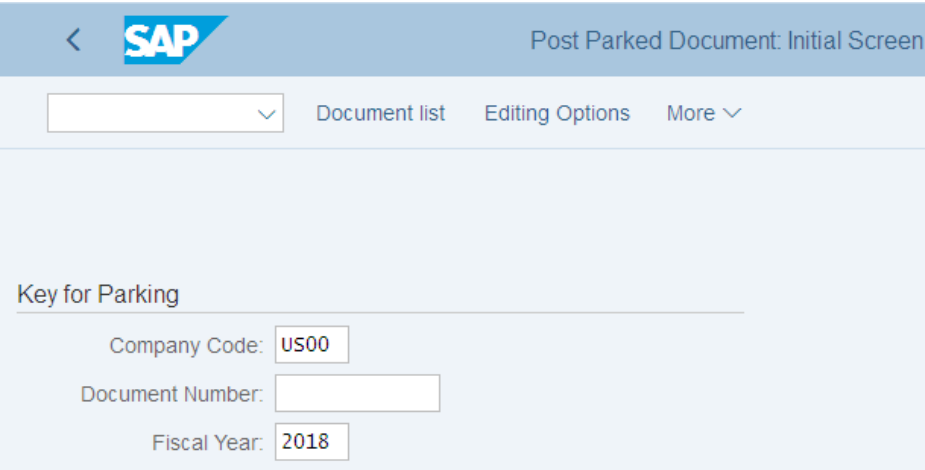

Upon processing the outgoing payments no open items can be found.

 No open items were found

Solution

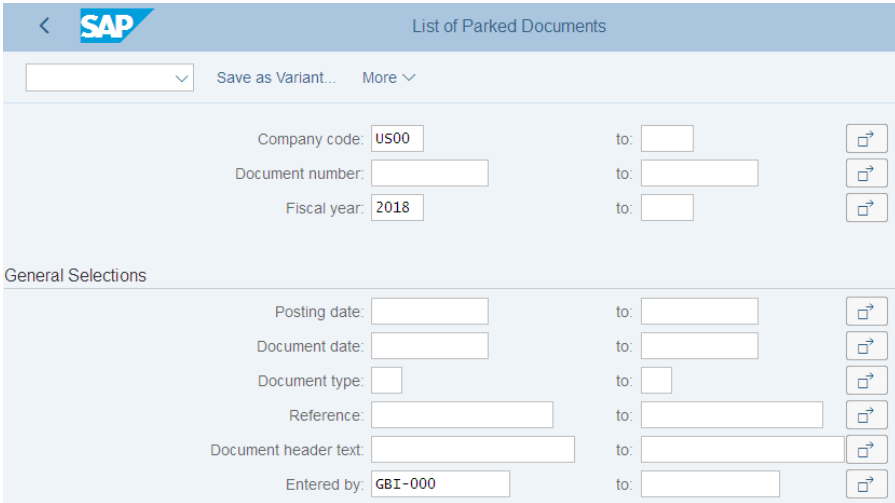

Open transaction **FBV0** which will produce the following screen

FBV0

The screenshot shows the SAP 'Post Parked Document: Initial Screen'. At the top, there is a navigation bar with a back arrow, the SAP logo, and the title 'Post Parked Document: Initial Screen'. Below the navigation bar, there is a dropdown menu and three buttons: 'Document list', 'Editing Options', and 'More'. The main area is titled 'Key for Parking' and contains three input fields: 'Company Code' with the value 'US00', 'Document Number' (empty), and 'Fiscal Year' with the value '2018'.

Click on **Document list** if you don't have the document number available. This will produce the following screen

The screenshot shows the SAP 'List of Parked Documents' screen. At the top, there is a navigation bar with a back arrow, the SAP logo, and the title 'List of Parked Documents'. Below the navigation bar, there is a dropdown menu and two buttons: 'Save as Variant...' and 'More'. The main area is divided into two sections. The top section contains three input fields: 'Company code' with the value 'US00', 'Document number' (empty), and 'Fiscal year' with the value '2018'. To the right of these fields are three 'to:' labels with empty input fields and a magnifying glass icon. The bottom section is titled 'General Selections' and contains several input fields: 'Posting date', 'Document date', 'Document type', 'Reference', 'Document header text', and 'Entered by' with the value 'GBI-000'. To the right of these fields are several 'to:' labels with empty input fields and a magnifying glass icon.

Company Code US00 and the current fiscal year should already be entered.
If not please fill out the fields.

The Entered by field is already filled out with your **user account**, change it accordingly and hit **F8**.

Double click the line to go to the Edit Parked Vendor Invoice screen.

Save to post your parked invoice. The following message appears.

F8

Solution: FI Challenge

Learning Objective Understand and perform a financial accounting process.

Motivation: After you have successfully worked through the *Financial Accounting* case study, you should be able to solve the following task on your own.

Scenario: The financial accounting system has now been tested without any errors. Therefore, the corporate management has decided to convert the system into the production operation. As a first order/request you should pay the new tool supplier Burgmeister Zubehör OHG. In order to do that, you will create the cost element tool expenses. Subsequently, you will receive an invoice for more than 3000€ from Burgmeister Zubehör OHG which has to be settled. You will review the impact on the financial statement at the end.

While you are operating in company code Germany use 10###6 as the number for the bank account, 11###6 for the reconciliation account, 75###6 for the expense account and 75###6 as the cost element.

Task Information Since this task is based on the *Financial Accounting* case study you can use it as guidance. However, it is recommended that you solve it without any help in order to test your acquired knowledge.

Create Bank Account in General Ledger

In the transaction **FS00** you can create a bank account as described in the case study. Just enter **DE00** as company code (not US00). As reference enter company code **DE00** as well.

FS00
DE00
DE00

The screenshot shows the SAP FS00 transaction screen. At the top, there's a header bar with the SAP logo and the text 'Edit G/L Account Centrally'. Below this, there's a navigation bar with buttons: 'Next tab', 'Send mail', 'Edit financial statement version', 'Edit set', 'More', and 'Exit'. The main area contains a form with the following fields: 'G/L Account' (109995), 'Company Code' (DE00), and 'Global Bike Inc.'. There are also icons for 'With Template', 'Lock', and 'Delete'. Below the form, there's a table with columns: 'Type/Description', 'Control Data', 'Create/bank/interest', 'Key word/translation', 'Information (C/A)', and 'Information (CoCd)'. A 'Reference Account' dialog box is open, showing 'G/L Account' (100000) and 'Company Code' (DE00). At the bottom of the dialog box, there are 'Continue' and 'Cancel' buttons.

The remaining steps of the transaction you can perform as described in the case study.

The next two steps *Create Reconciliation Account in General Ledger* and *Create Expense Account in General Ledger* you can perform as described

DE00

before. Enter the Company Code **DE00** and proceed further as described in the case study.

In the step *Create Expense Account in General Ledger* take G/L Account 740000 as reference account, enter **Materials ###** as Short Text and **Material Expenses ###** as G/L Acct Long Text.

Materials ###
Material Expenses ###

Create Cost Element for Expense Account

In the transaction **KA01** or **FS00** enter **75####5** as your G/L Account number and **DE00** as Company Code. Copy data from the Bank Account **740000** in Company Code **US00** by choosing **More ► G/L account ► Create with reference** and entering the necessary data. Confirm with **Continue**.

DE00
75####5
740000

Enter **Material Expenses ###** as Name as well as Description. Then, save your cost element. You can skip the following step *Create Vendor Master Record for Landlord*, because an already existing vendor will be used.

Material Expenses ###

Post Transfer of Funds to Alternate Bank Account

In the transaction **FB50** check if Company Code **DE00** is entered. If Company Code **DE00** is not displayed use the Menu Entry **Edit ► Change company code (F7)** to select your German GBI company. Further choose **EUR** as Currency.
